PT with Solder Contacts (MIL-C-26482 Series 1 Type)

Shell components: A variety of shell finishes (including non-cadmium) such as aluminum with standard olive drab with electrically conductive cadmium plating and zinc cobalt with black plating. Dependable 5 key/keyway polarization with bayonet lock coupling assures positive mating. Spring tension provided by a wave washer in the coupling nut ensures maintenance of interfacial seal between mating halves. Insert and main joint gasket molded from resilient neoprene. **Solder contacts** are installed. Pins and sockets are copper alloy/gold plated. PT solder series are UL recognized under file #E115497, Section 5

PT with Solder Contacts (MIL-C-26482 Series 1 Type)

Aluminum shell components: Non-conductive black zinc cobalt plated. Dependable 5 key/keyway polarization with bayonet lock coupling assures positive mating. Spring tension provided by a wave washer in the coupling nut ensures maintenance of interfacial seal between mating halves. Insert and main joint gasket molded from resilient neoprene.

Solder contacts are installed. Pins and sockets are copper alloy/gold plated.
PT solder series is UL recognized under file #E115497, Section 5

Circular Bayonet Lock Connectors *(Cont.)*

PT-SE with Crimp Contacts (MIL-C-26482 Series 1 Type)

Aluminum shell components: Standard olive drab, electrically conductive cadmium plated. Dependable 5 key/keyway polarization with bayonet lock coupling assures positive mating. Spring tension provided by a wave washer in the coupling nut ensures maintenance of interfacial seal between mating halves. Insert and main joint gasket molded from resilient neoprene.

Crimp contacts are included, but not installed. (See Astro Tool Corp. hand crimping tools and contact installation/removal tools). Pins and sockets are copper alloy/gold plated.

Miniature Push-Pull Connectors with Ground Function

MXR type connectors are miniature, lightweight, push-pull lock connectors with a ground function which has been developed for use with VTR camera and system camera interfaces.

Features:

- The single action push-pull lock function allows quick connections and disconnections as well as high density mounting
- Verification of a secure engagement is afforded by a click sound which exemplifies the fine feel of this lock system
- Use of aluminum alloy for the shell has contributed to the lightweight design
- One of the three conductors makes contact before the others in this sequenced design.

Specifications:

- **Withstand Voltage:** 300VAC for 1 minute • **Current Capacity:** 2A • **Insulation Resistance:** 1000MΩ or greater at 100VDC • **Contact Resistance:** 20mΩ or less at 1A AC • **Solder Pot Diameter:** 0.9mm diameter **Applications:** VTR cameras, system cameras, audio equipment, etc.

Materials:

- **Shell:** Aluminum alloy, nickel plating • **Insulation:** PBT resin, black, UL94V-0 • **Male Pins:** Brass, gold plating
- **Female Pins:** Phosphor bronze, partial gold plating

HR25 Series

RoHS COMPLIANT

World's Smallest Round Type Multiple Contact Connectors

The HR25 is the world's smallest high-density round type connector. It was developed using Hirose Electric's long experience with miniaturization technology in answer to the continuing need for the ever greater miniaturization and high-density construction of a wide variety of electronic equipment. The voltage used should be less than 30VAC or 42VDC. Wire AWG30.

Applications: • CCD cameras, measuring instruments, wide variety of sensors, mobile radio, medical equipment. **Material**: • Insulation: PPS resin, black • Contacts: Phosphor bronze, Gold and partial gold plating • Shell: Brass and zinc alloy, Nickel plating **Ratings**: • Current capacity 1A • Insulation resistance 1000MΩ or greater • Contact resistance 30mΩ • Solder pot inside diameter 0.5mm

V-Bite® PC Edge Mount

The V-Bite is an award winning design in the connector industry and has grown to be a reliable choice where the best connections are needed. It edge mounts to the board to utilize very little PCB space and locks into place both above and below the PCB to disperse rotational torque relief to the board and not the solder points.

The X-2 Dual BNC jacks were designed to satisfy engineers' requirements for maximizing PCB space and installation efficiency. These new dual jacks accommodate two connectors in the space of one and have an available back plate for full shielding

Between Series Adapters

Between Series Adapters solve a variety of connection problems where connectors of different types ordinarily could not be mated together. Each adapter has a different type of coupling at each end allowing for a wide variety of interconnections to fit almost all interconnection situations. All adapters are constructed of machined brass and are nickel plated.

EZ-RJ45™ Modular Plugs

EZ-RJ45 Category 5 and 6 plugs are simple and fool-proof to install. All you do is separate the pairs to a length you want to work with, place in correct order and insert through the connector. The conductors pass out the end so you can inspect for accuracy and the Bomar (BD45000) tool crimps and cuts in one clean operation.

FAKRA and FAKRA II SMB Connectors

RoHS COMPLIANT

With recent advancements in communications technology and increased consumer demand for a diverse array of on-board telematics services, RF communications systems have become indispensable components of the modern automobile. To keep RF interconnection costs low and ensure high levels of electrical and mechanical performance the German and American automotive industries have standardized a high-performing, cost-effective RF connector based on the FAKRA and USCAR standards. Utilizing a standard metal SMB connector embedded within a plastic housing that can be designed with multiple colored codes for easy identification, FAKRA connectors are designed to perform up to 4GHz and meet the particular mechanical and environmental requirements of the automobile industry. **FEATURES: Electrical:** • Impedance: 50Ω • Frequency Range: DC-4GHz • Performance Specification: SAE/USCAR-17 • Insulation Resistance: 1000MΩ minimum • Center Contact Resistance: center contact <20mΩ; outer contact <10mΩ • Dielectric Withstanding Voltage (sea level): >1000VRMS **Mechanical:** • Durability (matings): 100 minimum • Plastic Housing Engagement Force: ≤20 N • Plastic Housing Disengagement Force: ≥25 N • Coding: 13 mechanical and colored codings • Plastic Housing: PBT with 15% Glass Fiber • Secondary Locking Clip: PBT with 15% Glass Fiber • Center Contact (female): Beryllium Copper; (male): Brass • Body: Brass • Barrel: Brass • Retainer Ring: Beryllium Copper • Ferrule: Copper • Insulator: TFE • Center Contact Plating: Gold • Body, Barrel and Ferrule Plating: Nickel. FAKRA connectors incorporate machined components. FAKRA II connector series utilizes die cast as well as stamped and formed components.

QMA Connector Series

The QMA connector is a quick disconnect version of the SMA connector and shares the same internal construction, which allows the connector to have excellent performance. Because of the innovative coupling mechanism, a 360-degree butt joint is maintained which results in low RF leakage. Since the RF line is identical to the SMA series, QMA connectors also offer the same high power handling capability. This gives the series significant advantages over other quick disconnect connectors, although QMA and SMA are not intermatable. Typically, these connectors can be installed into a system 10 times faster than an SMA connector. Another benefit of eliminating the threaded coupling is the denser packaging.

SMK (2.92mm) Connectors

RoHS COMPLIANT

SMK Connectors provide an excellent solution for applications requiring high frequency transmission. Similar to the SMA interface, a smaller internal body diameter (2.92mm) and air dielectric provide a higher cutoff frequency and other key advantages: • Superior electrical performance to 40GHz • Female contacts have a three-slot construction, which enhances connectivity • The Field Replacement Jacks with a high quality hermetic seal feed thru for use in sealed circuit modules • The SMK plug interface employs more precise dimensions than an SMA and uses a shorter snub nose male pin such that the connector bodies align before the contacts engage

ELCON CROWN CLIP Sockets

CROWN CLIP sockets are compact, high-current socket connectors for high current bus bar power distribution. Using ELCON high performance CROWN BAND technology, CROWN CLIP sockets are available in single pole format to mate with a solid blade, handling up to 350 amps, or in dual pole format to mate with laminated bus bar tabs for feed and return currents.

Applications: • Bus bar based power distribution • Power racks • Rack mounted switching power supplies

ELCON RAPID LOCK Bus Bar Connectors

The RAPID LOCK connectors are single-pole, quick connect/disconnect replacement for lug connections, used in bus bar and backplane power distribution applications. RAPID LOCK connectors allow a reliable and safe connection, as well as better serviceability, than bolt-fitted lugs. The cable mounted sockets have a right angle configuration, and feature an insulator cap that provides the retention mechanism on the pin. The pin contacts can be attached to a bus bar by screw or swage, and to a backplane by press fit and backup screw.

Features: • Locking feature "snaps" each contact to mating pin • Low contact resistance • Up to 250A per contact

NEW! Z-PACK™ Impact™ High Density Backplane Connectors

Dimensions in mm

Designed for increased speed and density to meet the future system upgrades and next generation requirements of data networking and telecommunications equipment. The Impact connector design system contains a unique broad-edge coupled design which utilizes low impedance, localized ground return path in an optimized differential pair array. Additionally, differential pairs are tightly coupled and surrounded by ground structures to isolate the pairs, which in turn reduces crosstalk and increases overall bandwidth performance with minimal performance variance.

Features: • 25Gb/s performance • 100Ω Impedance • Built in guidance available for improved mating alignment and to maximize available PCB real estate **Applications**: Ideal for high speed, backplane applications: • Switches • Servers/Blade Servers • Routers • Storage

VITA 41/46 Connectors

Vita 41 is an ANSI standard that combines parallel VMEbus with enhancements to support switched serial fabrics including PCI Express, RapidIO, StarFabric and InfiniBand over a new high speed P0 connector. Backward compatibility is maintained with existing backplanes that do not have a conflicting P0 scheme. Combining the VME2eSST parallel bus with switch fabric technologies for multi-point, high-speed data transfers creates choices for embedded computing designs of all types. The standard also incorporates ANSI/VITA 1.7, allowing more DC power input into each board.

MULTIGIG RT @ VITA 46 Compliant Backplane Connector System represents the leading edge of avionics and vehtronics backplane connector technology. Originally chosen for the VITA 41 VXS standard, the connector was again chosen and evolved by the VITA 46 VPX working group for rugged applications demanding extreme electrical and mechanical performance. AirMax VS® High Speed Connector System

RoHS COMPLIANT

The AirMax VS connector is a revolutionary connector system that offers scalability, flexibility, high density and headroom in performance. "VS" stands for Virtual Shield as this technology requires no interleaving shields. The elimination of these shields results in lower cost, lower weight and offers greater flexibility.

AirMax VS high-speed signal connectors, guide modules, and power connectors serve to connect SSI Compute Blade, Mezzanine, and Chassis Management Modules to the Midplane or Backplane.

Features: • Shieldless connector system • High pin density per module • Designed to fit HM (hard metric) building practice • No pre-assigned ground pins • Excellent electrical performance • Low weight and low mating forces

MicroTCA™ Vertical Card Edge Connectors

RoHS COMPLIANT

MicroTCA (µTCA™) vertical card edge connectors provide 170 contacts on 0.75mm pitch and enable AdvancedMC™ (AMC™) modules to be plugged directly to a backplane. FCI connectors are in full compliance with the MicroTCA standard. The press-fit version accommodates speeds up to 10 Gb/s, and the SMT version supports speeds of 10 Gb/s and beyond. FCI's MicroTCA connectors are designed for low manufacturing cost through the use of proven connector manufacturing processes, low cost materials and a minimal number of components. Capability for connector installation using standard press-fit or SMT assembly processes, combined with connector designs that require no costly hardware, secondary mechanical retention or compensating board stiffeners, result in low total applied cost. Metal retention clips on the SMT connectors provide additional mechanical strength after soldering.

ZipLine™ High Density, High Performance Connector System

RoHS COMPLIANT

The ZipLine connector system addresses customer demand for maximum signal density, a paramount requirement for future equipment platforms at data rates up to 12.5 Gb/s. The initial ZipLine signal modules with 1.8mm column pitch support backplane and orthogonal midplane applications. A module with 72 differential pairs consisting of 12 insert molded leadframe assemblies (IMLAs), each supporting 6 high speed differential signal pairs provides the maximum density available by delivering 84.6 differential pairs per inch of card edge. The connector system leverages FCI proven AirMax VS® technology, similar signal integrity performance, power and guide modules and Hard Metric (HM) equipment design practice. ZipLine connectors use AirMax VS edge coupling technology to deliver low insertion loss and crosstalk without using costly and space consuming metals shields. Data rates can scale up to 12.5 Gb/s without requiring the redesign of a basic platform.

SATA Connectors

Serial ATA (SATA) provides data speeds up to 3Gbits per second while utilizing a smaller number of contacts. SATA is the next generation standard interface for all mainstream storage, data, notebook, and desktop applications. SATA provides many significant advantages over the current parallel ATA standard. Improved density, along with lower voltage transmission eliminates the requirement for bulky ribbon cables. The result is much better airflow through the device utilizing this interconnect. In addition, SATA utilizes a first mate, last break contact arrangement for hot plugging capability.

FCI PCI Express™ Card Edge Connectors

These 1.0mm pitch, vertical card edge connectors are used to implement the evolutionary PCI Express strategy in ATX or ATX-based desktop PCs and server systems. The connector family offers 1 to 16 high-speed serial PCI Express Lanes. Each serial lane supports 2.5 Gbps data rate (per direction). The connector family supports x1, x4, x8, or x16 link widths to suit different bandwidth requirements. All connectors support the PCI Express signal and power requirements, as well as auxiliary signals at the interface between system board and add-in card hardware.

Materials: • Contact Base Metal: Copper alloy • Contact Area Finish: Gold over nickel • Solder Area Finish: Tin over nickel • Housing Material: High-temperature thermoplastic (UL 94V-0) Color: Black • Metal Board Locks: Copper alloy • Board Locks Finish: Tin over nickel **Electrical Performance:** • Contact Resistance: 30mΩ maximum initially with 10mΩ maximum change after environmental exposures • Current Rating: 1.1A minimum per pin for the 7 power pins and 7 nearest ground pins **Mechanical Performance:** • Durability Rating: 50 cycles minimum

NEW! Mini SAS / SATA Connectors, Cages and Cable Assemblies

FCI's external mini-SAS/SATA connector, cage and cable assembly system solution addresses the storage industry's demand for more compact, high-speed serial I/O interfaces that also support evolving signal speed requirements. Increasing numbers of drives within a system demand additional I/O ports along a card edge, dictating more densely packaged serial I/O solutions. The mini-SAS/SATA I/O system provides a cost-effective, high-speed solution that meets the bandwidth requirements of current and future applications in servers and external storage systems. FCI's connectors and cable assemblies meet Serial Attached SCSI (SAS) or Serial ATA (SATA) requirements for mini-multilane external systems thus assuring inter-mateability with standardized port interfaces. Specifically, FCI's mini-SAS/SATA solutions satisfy the applicable requirements of the INCITS T10 SAS 2.0 and SAS 2.1 specification or the SATA-IO Serial ATA specification and conform to the mechanical requirements described in the associated SFF-8086 and SFF-8088 documents. The availability of both min-SAS and mini-SATA compatible connectors, cages and cable assemblies gives the user the option to choose the most appropriate and cost-effective link for their respective application.

NEW! Smart Card Interconnect Devices

Fig. 1 — CCM01

MK II: EMV™ Compatible. MK II connectors with fixed contacts have been developed for applications where a landing contact mechanism is not required but performance and reliability are still key considerations.

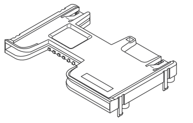

Fig. 2 — CCM02

MK II: EMV Compatible. MK II connectors with landing contacts are dedicated for applications where the reader usage is high and the span of the card is a key consideration. It has been redesigned to give an even higher performance in a compact, affordable package. Features: 500,000 card insertion cycles.

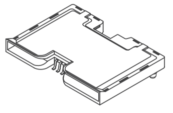

Fig. 3 — CCM03

MK II: Developed to interface with SIM/SAM cards as defined by GSM11-11 and ENV1375-1. Available with either hinged covers or fixed covers and have been designed to minimize the amount of space needed for PCB mounting. The high temperature thermoplastic moldings are suited for infrared and convection soldering processes.

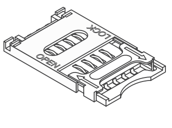

Fig. 4 — CCM03

MK III: Smallest solution for SIM/SAM cards with low profile sealed switch. This connector provides a competitive advantage to smart card reader device manufacturers by minimizing the space usage on the PCB, and features a side entry to offer convenient card access without opening the device, and meets GSM11-11 specifications.

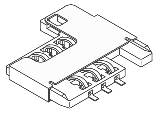

Fig. 5 — CCM04

For applications that require a switch and do not want to struggle with correct sequencing and PCB saving is still a must. The contact area is spooned to reduce the risk of accidental (or deliberate) damage to optimize the electrical connection with the card.

Features: The SFP system follows the function of the standard Gigabit Interface Converter (GBIC) products, with reduced size and increased data-transfer rates at and beyond two Gigabits per second (Gbps). A multi-source, industry-standard product line, our SFP products feature a common design interface for use with multiple data transfer protocols, including Fibre Channel, Gigabit Ethernet, InfiniBand and proprietary links. SFP+ takes SFP to the next level. SFP+ interconnects are designed to support applications for 8Gbps Fibre Channel and 10Gbps Gigabit Ethernet. SFP+ interconnects use the same space-per-port as standard SFP interconnects, therefore providing 11.1Gbps capability in a space that is 30% smaller than XFP.

Cage Features: • All metal construction for EMI protection • Two point spring contacts for optimal EMI grounding • Chamfered edges on cover facilitate assembly • Design allows cages to be mounted on opposite sides of PCB for "belly-to-belly" applications

SMT Receptacle: • Alignment posts provide stability for placement on the PCB • Standoffs allow easy PCB cleaning after soldering • SMT design provides option for placement on both sides of PCB

Connector and Cable Assembly Solutions for Higher Density and Increased Speeds • The iPass Interconnect System offers both connectors and cable assemblies that enable flexible speed compatibility for applications ranging from 1.5 to 6.0Gpbs, with capability up to 10.0Gbps, and is an ideal interconnect solution for the growing server storage market. The iPass products support these industry standards for high-speed, multi-lane internal and external systems: • SAS (Serial Attached SCSI), also termed Mini-SAS • SATA (Serial ATA International Organization), also termed Mini-SATA • SFF (Small Form Factor), for Compact MultiLane/CML • External PCI Express (PCIe) x4, x8, x16. **External iPass Products:** • SMT Host connector *(Series 75586):* Provides placement options on both sides of the PC with a pitch of 0.8mm (0.31") • 4X External Cable Assemblies *(Series 74547):* High-performance paddle-card design with impedance matching helps reduce crosstalk and provide improved signal integrity. It also features a flexible low profile, latch pull mechanism **Internal Products:** • Right Angle and Vertical Internal Connectors with Hood Kits *(Series 75783):* 0.80mm (0.031") pitch include hood kits for internal applications • Internal Cable Assemblies *(Series 79576):* Can support SAS Generation I (3.0Gbps) and II (6.0Gbps) bandwidths, as well as SATA Generation I (1.5Gbps) and II (3.0Gbps) bandwidths.

Copper Cable Assemblies (Series 111025): These copper cables are designed to accommodate single, ganged or stacked connector configurations in extremely high-density requirements. CXP passive copper cables are available in a variety of lengths.

iPass+ HSC CXP products: Integrated Connector (Series 76105): By leveraging high-speed wafer technology and compliant pin tails, Molex developed a higher density, 12-channel connector system capable of achieving Quad Data Rates (QDR) of 10 Gbps. This one piece press-fit connector and cage assembly provides one-step placement to the board.

Stacked Dual-Port Integrated Connector (Series 76024): This stacked dual-port connector and cage assembly integrates two individual 12x ports into a single press-fit connector that provides one-step placement to the board.

Amphenol® Commercial Products SFP/SFP+ Connectors

Digi-Reel® RoHS COMPLIANT

Amphenol's SFP connector series is a 20 position connector and cage combo for mounting to a host PCB with a metal cage enclosing the connector. These connectors are similar to the Gigabit Interface Converter Interface (GBIC), but they are smaller in size and operate at much faster data transfer rates. Amphenol single port version is rated up to 4.125 Gbps data rates and stacked version up to 8 Gbps.

Specifications: • **Operating Temperature:** -40°C ~ 85°C • **Contacts:** Phosphor bronze. Amphenol Commercial Products' ExpressPort™ SFP+ Combos expand Amphenol's SFP series product offering to provide data transfer speeds of up to 10 Gbps. This is a high speed I/O interconnect system providing a higher speed, inexpensive External I/O product, primarily for the networking, telecom and storage systems markets.

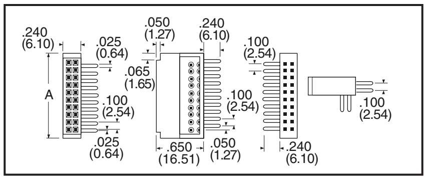
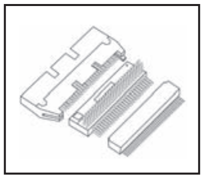
3M Intra-Connector™





The Intra-Connector mates in-line with standard double row socket connectors. It has one set of female contacts, but two sets of male contacts at right angles. It provides instant line-by-line "probe-ability." The pins can also be used to make daisy chaining possible from a single connector cable end. Modified configurations are quickly available for special connections. The Intra-Connector system provides both straight-in and right angle functions. It mates with a standard .10" x .10" (2.54mm x 2.54mm) dual row connector or PC board-mounted .025" (.64mm) square pins. Two Intra-Connector systems used with the Intra-Switch™ system form a complete test assembly for probing signals under no load and full-load conditions.

Contacts are non-corrosive Alloy 770; body is glass-filled polyester thermoplastic.

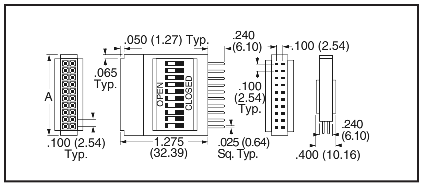
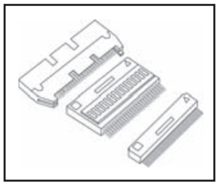
3M Intra-Switch™





The low profile design and recessed switch buttons allow room for working in confined areas. Using a pencil or probe tip, any or all switches may be actuated.

Applications include switching command signals to or from test equipment and programming optional preset logic functions. Switch buttons are recessed to prevent accidental switching. "Open" and "closed" positions are clearly marked, molded-in the body.

Contacts are non-corrosive Alloy 770; body is glass-filled polyester thermoplastic.

Intra-Switch is compatible with most sockets and mating headers for flat cable, including 3M, T&B/Ansley, Berg, Amp, Symbex and many others.

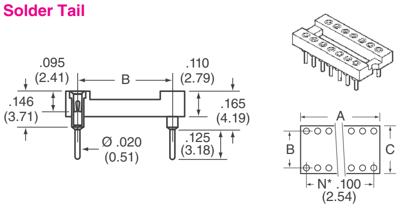
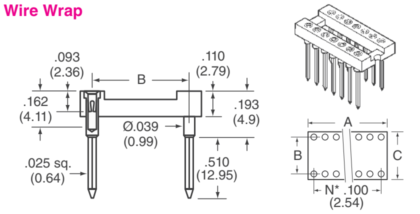
MILL-MAX Dual-In-Line Sockets – Open Frame (Screw Machined)

Solder Tail



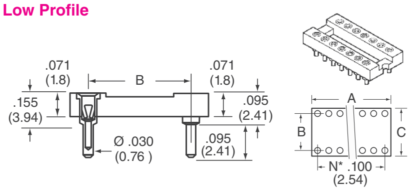
Most popular line of standard low profile IC-Sockets. Open frame design leaves space beneath IC for improved heat dissipation, easier PCB cleaning and inspection. **Insertion Characteristics:** 4-finger standard

Wire Wrap



Solderless wire wrap terminals are firmly locked in the insulator body to withstand torque of wrapping tool. Length of terminal for three-level wrapping. **Insertion Characteristics:** 4-finger standard

Low Profile



"Ultra low profile" Dual-in-line sockets are equipped with specially designed contacts allowing .095" (2.41mm) height above PCB. Special short contact requires .075" (1.91mm) insertion depth only. Solder tail diameter .030" (.76mm). **Insertion Characteristics:** 4-finger short contact

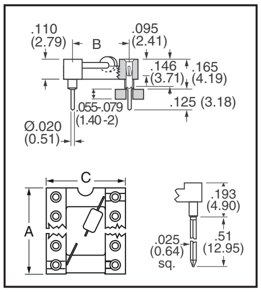
IC Sockets

With Integral Decoupling Capacitor Machine Screw Contact



Special Features/Applications:

- To eliminate noise at the source before it can reach the chip
- Advantages for uses such as high speed logic and memory applications
- To eliminate long leads as potential sources of noise because capacitor leads are connected directly to the ground and voltage pin of the socket

Technical Data: • Insulator body material: glass filled polyester UL94V-0 • Pin: screw machined Socket with integral glass encapsulated ceramic capacitor 0.1μF, 50VDC

Single In-Line Sockets – Solderless Press Fit, Compliant Tail

Features:
Unique compliant tail pins conforms to .040" ±.003" (1.02mm ±.08mm) finished hole diameter without stressing inner layers.

Application of Compliant Tail Pins:
Mill-Max's patented (Patent No. 4,799,904) compliant tail features precision machined pins that are hollow and slotted to conform to a .040" ±.003" (1.02mm ±.08mm) diameter PTH. As the pin is inserted, the slot compresses to fit the PTH, thus avoiding damage (see illustration). The pin's tail has fine serrations that form a perfect "gas tight" connection that doesn't require soldering, and since the pin doesn't damage the hole, compliant tail sockets and connectors can be easily replaced.

TO-220 Solder Tail Transistor Sockets

P.C. Board Mount:

.100" (2.54mm) center. These three circuit transistor sockets are pre-assembled and ready for soldering to a P.C. Board. The proven double cantilever design eliminates circuit failure due to thermal expansion and/or mechanical tolerances. Linear movement of the transistor leads in the socket does not affect contact reliability.

Material:

Tin-Plated Brass, 94V-2 Rated Nylon

artaflex WirelessUSB™ Modules

Operating in the 2.4GHz ISM band, the Falcon series modules are based on Cypress's WirelessUSB LP technology. The modules offer low-power consumption and deliver data rates up to 1Mb/s, with ranges between 50 meters for print antenna devices up to 1 kilometer for devices equipped with a power amplifier. Additionally, WirelessUSB LP features direct sequence spread-spectrum (DSSS) technology, which provides the industry's most robust immunity for interference from other technologies like 802.11b/g, Bluetooth, cordless phones and microwave ovens. The modules feature a data transmission rate of up to 1Mbps with an average latency of below 2 milliseconds. The modules are certified with modular grants by the Federal Communications Commission (FCC), the European Telecommunications Standards Institute (ETSI), and industry Canada, translating into modular approval and eliminating the need to test for RF compliance.

CREE®

High Wattage SiC RF Power MESFETs

Cree is a leading supplier of silicon carbide (SiC) and gallium nitride (GaN) wafers and devices for wireless communications. **Typical Applications Include:** • 2-Way, Private Radios • Broadband Amplifiers • Cellular Infrastructure • Test Instrumentation • Class A, AB, Linear Amplifiers Suitable with OFDM, W-CDMA, Edge, CDMA Wave Forms.

Cree wireless devices are especially well-suited for high-power communications because of the material used, silicon carbide (SiC). SiC has several intrinsic advantages that enable broadband amplifiers for UHF, "L" Band and "S" Band applications. **These Properties Include:** • High thermal conductivity • High breakdown electric field • High saturated electron drift velocity • High power density (power per unit gate periphery).

These features make SiC MESFET an attractive power FET for multi-octave to decade bandwidth power amplifiers.
